Seismic Motions

Inelasticity and Energy Dissipation

Conclusion 000

Motivation

Motivation

Improve seismic modeling and simulation for infrastructure objects

Use of high fidelity numerical models to analyze seismic behavior of soil structure systems

Reduction of modeling uncertainty, ability to perform high(er) level of sophistication modeling and simulation

Accurately follow the flow of seismic energy in a soil structure system

Personalization of the seismic problem

Jeremić et al.

UCDAV

Observations and Regional Models

3D (6D) Seismic Motions

- All (most) measured motions are full 3D (6D)
- ► One example of an almost 2D motion (LSST07, LSST12)

▶ 1D (?): M 6.9 San Pablo, Guatemala EQ, 14Jun2017

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Observations and Regional Models

Regional Geophysical Models

- ► High fidelity free field seismic motions on regional scale
- ► Knowledge of geology (deep and shallow) needed
- ► High Performance Computing using SW4 on CORI (LBNL)
- Collaboration with LLNL: Dr. Rodgers, Dr. Pitarka and Dr. Petersson

Jeremić et al.

LICDAV

Stress Test Motions

Stress Testing SSI Systems

- Excite SSI system with a suite of seismic motions
- Simple sources, variation in strike and dip, P and S waves, surface waves (Rayleigh, Love, etc.)
- Stress test soil-structure system
- Try to "break" the system, shake-out strong and weak links

Jeremić et al.

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Stress Test Motions

Stress Test Source Signals

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Stress Test Motions

Layered and Dyke/Sill Models

- (a) Horizontal layers
- ► (b) Dyke/Sill intrusion

- Source locations matrix (point sources)
- Source strike and dip variation
- Magnitude variations
- Range of frequencies

Jeremić et al.

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Stress Test Motions

Layered System, Displacement Traces

- Epicenter is 2500m away from the location of interest
- Source depth 850m (left) and 2500m (right)
- Different wave propagation path to the point of interest
- Surface waves quite pronounced
- Layered geology did not filter out surface waves

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Stress Test Motions

Layered System, Variable Source Depth

Jeremić et al.

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Stress Test Motions

Dyke/Sill Intrusion, Variable Source Depth

- Lower amplitudes than with layered only model!
- Difference in body and surface wave arrivals
- Surface waves present, more complicated wave field

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Stress Test Motions

Dyke/Sill Intrusion, Variable Source Depth

Jeremić et al.

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Stress Test Motions

Dyke/Sill as Seismic Energy Sink

- Dyke/Sill (right Fig), made of stiff rock, is an energy sink, as well as energy reflector
- Variable wave lengths behave differently, depending on dyke/sill geometry and location

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Energy Dissipation

Outline

Introduction

Seismic Motions Observations and Regional Models Stress Test Motions

Inelasticity and Energy Dissipation Energy Dissipation Probabilistic Inelastic Modeling

Conclusion Summary

Jeremić et al.

Seismic Motions

Energy Dissipation

Seismic Energy Input and Dissipation

Seismic energy input, through a closed boundary (DRM)

Mechanical dissipation outside SSI domain:

Reflected wave radiation

SSI system oscillation radiation

Mechanical dissipation/conversion inside SSI domain:

Inelasticity of soil and contact zone Inelasticity/damage of structure and foundation Viscous coupling of fluids and soils and structure

Numerical energy dissipation/production

Jeremić et al.

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Energy Dissipation

Incremental Plastic Work: $dW_p = \sigma_{ij} d\epsilon_{ij}^{pl}$

- Negative incremental energy dissipation
- Plastic work is NOT plastic dissipation

Jeremić et al.

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Energy Dissipation

Negative Incremental Energy Dissipation!

Direct violation of the second law of thermodynamics

600 papers since 1990 (!?!) repeat this error

Important form of energy missing: Plastic Free Energy

First described by Taylor and Quinney in 1934!

Plastic Work vs. Plastic Energy Dissipation

Jeremić et al.

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Energy Dissipation

Energy Dissipation on Material Level

Single elastic-plastic element under cyclic shear loading

Difference between plastic work and dissipation Plastic work can decrease, dissipation always increases

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Energy Dissipation

Energy Dissipation in a Large-Scale Model (NPP)

Jeremić et al

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Probabilistic Inelastic Modeling

Parametric Uncertainty: Material and Loads

- Significant uncertainty in material and loads
- Propagate uncertainties in space and time

Transformation of SPT N-value: 1-D Young's modulus, E (cf. Phoon and Kulhawy (1999B))

Jeremić et al.

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Probabilistic Inelastic Modeling

Stochastic Elastic-Plastic Finite Element Method (SEPFEM)

Material uncertainty expanded along stochastic shape functions: $D(x, t, \theta) = \sum_{i=0}^{P_d} r_i(x, t) * \Phi_i[\{\xi_1, ..., \xi_m\}]$

Loading uncertainty expanded along stochastic shape functions: $f(x, t, \theta) = \sum_{i=0}^{P_f} f_i(x, t) * \zeta_i [\{\xi_{m+1}, ..., \xi_f]$

Displacement expanded along stochastic shape functions: $u(x, t, \theta) = \sum_{i=0}^{P_u} u_i(x, t) * \Psi_i[\{\xi_1, ..., \xi_m, \xi_{m+1}, ..., \xi_f\}]$

Jeremić et al.

Seismic Motions

Inelasticity and Energy Dissipation

Conclusion

Probabilistic Inelastic Modeling

SEPFEM : Formulation

Stochastic system of equation resulting from Galerkin approach

# KL terms material	# KL terms load	PC order displacement	Total # terms per DoF
4	4	10	43758
4	4	20	3 108 105
4	4	30	48 903 492
6	6	10	646 646
6	6	20	225 792 840
