Introduction
00000000

Modeling and Simulation Examples

Conclusion

Motivation

Motivation

Improve modeling and simulation for infrastructure objects Reduction of modeling uncertainty Choice of analysis level of sophistication Goal: Predict and Inform rather than fit Engineer needs to know!

Jeremić et al.

Introduction
00000000

Modeling and Simulation Examples

Conclusion

Motivation

Hypothesis

- Interplay of the Earthquake, Soil/Rock and Structure in time domain, plays a major role in successes and failures
- Timing and spatial location of energy dissipation determines location and amount of damage
- If timing and spatial location of the energy dissipation can be controlled (directed), we could optimize soil structure system for
 - Safety
 - Economy

Jeremić et al.

Modeling and Simulation Examples

Conclusion

Motivation

ESSI: Energy Input and Dissipation

Energy input, dynamic forcing

Energy dissipation outside SSI domain:

- SSI system oscillation radiation
- Reflected wave radiation

Energy dissipation/conversion inside SSI domain:

- Inelasticity of soil, contact/interface zone, structure, foundation, dissipators
- Viscous coupling, porous solid-pore fluids, solids/structures-external fluids

Numerical, algorithmic energy dissipation/production

Jeremić et al.

Modeling and Simulation Examples

Conclusion

Motivation

Prediction under Uncertainty

- Modeling Uncertainty, Simplifying assumptions
 Low, medium, high sophistication modeling and simulation
 Choice of sophistication level for confidence in results
- ► Parametric Uncertainty, $M\ddot{u}_i + C\dot{u}_i + K^{ep}u_i = F(t)$,

Uncertain mass *M*, viscous damping *C* and stiffness K^{ep} Propagation of uncertainty in loads, F(t)Results are PDFs and CDFs for σ_{ij} , ϵ_{ij} , u_i , \dot{u}_i , \ddot{u}_i

Jeremić et al.

Introduction
000000000

Modeling and Simulation Examples

Conclusion

Motivation

Goal: Reduction of Modeling Uncertainty

- Modeling Uncertainty: introduced with unnecessary and unrealistic modeling simplification
- Simplified (or inadequate/wrong) modeling: important features are missed (3C (6C) seismic ground motions, inelasticity, etc.)
- Modeling simplifications are justifiable if one, two or higher level sophistication model demonstrates that features being simplified out are not important
- Use of HPC for low modeling uncertainty and direct probabilistic modeling and simulations

Jeremić et al.

Real-ESSI Simulator System

The Real-ESSI, **<u>Real</u>**istic Modeling and Simulation of <u>Earthquakes</u>, <u>Soils</u>, <u>Structures and their</u> <u>Interaction</u> Simulator is a software, hardware and documentation system for time domain, linear and nonlinear, elastic and inelastic, deterministic or probabilistic, 3D, modeling and simulation of:

- statics and dynamics of soil,
- statics and dynamics of rock,
- statics and dynamics of structures,
- statics of soil-structure systems, and
- dynamics of earthquake-soil-structure system interaction

Used for:

- Design, linear elastic, load combinations, dimensioning
- Assessment, nonlinear/inelastic, safety margins

Jeremić et al.

Real-ESSI Simulator System

Conclusion

Real ESSI Components

Real-ESSI Simulator System

- Real-ESSI System Components
 - Real-ESSI Pre-processor (gmsh/gmESSI, X2ESSI)
 - Real-ESSI Program (local, remote, cloud)
 - Real-ESSI Post-Processor (Paraview/pvESSI, Python)
- Real-ESSI System availability: Linux Executables, AWS, DesignSafe/TACC
- Real-ESSI education and training: theory and applications
- Real-ESSI documentation and program available at http://real-essi.info/

Jeremić et al.

Real-ESSI Simulator System

Modeling and Simulation Examples

Conclusion

LICDA

Real ESSI Components

Real-ESSI Modeling Features

- Solid elements: dry, (un-)saturated, elastic, inelastic
- Structural elements: beams, shells, elastic, inelastic
- Contact/interface/joint elements: Bonded, Shear/Frictional (EPP, EPH, EPS); Gap/Normal; linear, nonlinear, dry, coupled/saturated,
- Super element: stiffness and mass matrices
- Material models: soil, rock, concrete, steel...
- Seismic input: 1C and 3C, deterministic or probabilistic
- Energy dissipation: elastic-plastic, viscous, algorithmic
- Solid/Structure-Fluid interaction, full coupling, OpenFOAM
- Intrusive probabilistic inelastic modeling

Jeremić et al.

Real-ESSI Simulator System

Modeling and Simulation Examples

Conclusion

Real ESSI Components

Real-ESSI Simulation Features

- Static loading stages
- Dynamic loading stages
- Restart, simulation tree
- Solution advancement methods/algorithms, on global and constitutive levels, with and without enforcing equilibrium
- High Performance Computing
 - . Fine grained, template mataprograms, small matrix library
 - . Coarse grained, distributed memory parallel

LICDAV

Conclusion

Real ESSI Components

Real ESSI Simulator: Domain Specific Language, DSL

- ► Domain Specific Language (DSL), Yacc & Lex
- English like modeling and simulation language
- ► Parser and compiler, can define functions, models, etc.
- Can extend models and methods
- Requires units!

Jeremić et al.

Real-ESSI Simulator System

Modeling and Simulation Examples

Conclusion

Real ESSI Components

DSL: English Language Binding Modeling Parser

1	// Defining variables
2	x = 7; // x is double-valued variable with adimenisional units.
3	y = 3.972e+2; // Decimal and scientific notation is supported.
4	// Operations: All standard arithmetic operations (Unites!)
5	a = x + y; // Addition
6	b = x - y; // Subtraction
7	c = x∗y; // Product
8	d = x/y; // Quotient
9	e = y%x; // Modulus (how many times x fits in y)
10	// Predefined variables. For example, the variable 'm' defines 'meter'.
11	L1 = 1 *m;
12	L2 = 40 mm; // Defines L2 to be 40 millimiters.
13	$L3 = 3.14 \times cm;$
14	L4 = 3.14;
15	$A5 = 3.14 \times cm^2;$

Jeremić et al.

Real-ESSI Simulator System

Modeling and Simulation Examples

Conclusion

Real ESSI Components

DSL: English Language Modeling Parser

1	F1 = 10 kN; // Define few forces.
2	F2 = 300*N;
3	F3 = 4*kg*g; // Here g is the predefined acceleration
4	// due to gravity.
5	// Operations are sensitive to units. For example,
6	foo = L1 + F1; // Produces an error because units are
7	// not compatible. However,
8	L4 = L1 + L2 + L3; // is OK.
9	// Multiplication (division and modulus) always work
10	// because the result produces a quantity with new units
11	// (except when the adimensional quantity is involved).
12	$A = L1 \star L2;$
13	pressure = F1 / A;
14	// All numbers are converted to SI units (kg $-m - s$)
15	// and internally stored in that system.

Jeremić et al.

Real-ESSI Simulator System

Modeling and Simulation Examples

Conclusion

Real ESSI Components

DSL: ESSI Input Language, Basics

- Angle brackets <> denotes user input
- Expected unit (dimension) is given (example: <L>, for length unit)
- Symbol <..> represents the adimensional quantity.
- Vertical bar | ("OR" sign)) is used to separate two or more keyword options, i.e. [a|b|c] is used indicate keyword options a Or b Or c.
- The symbol |...| is used to denote where several long options exist and are explained elsewhere (an example of this is available below in a material model definitions).

Jeremić et al.

Real-ESSI Simulator System

Modeling and Simulation Examples

Conclusion

LICDAV

Real ESSI Components

DSL: ESSI Input Language, Units

All commands require unit consistency. Base units, SI or other (British Imperial) can be used

- ► length, symbol *L*, units [m, in, ft]
- ▶ mass, symbol *M*, units [kg, lb],
- ► time, symbol *T*, units [s]

Derived units can also be used:

- ► angle, symbol rad (radian), unit [*dimensionless*, *L*/*L*]
- ▶ force, symbol N (Newton), units $[N, kN, MN, M * L/T^2]$,
- ► stress, symbol Pa (Pascal), units [Pa, kPa, MPa, N/L², M/L/T²]
- strain, symbol (no symbol), units [L/L]
- mass density, symbol (no symbol), units $[M/L^3]$
- force density, symbol (no symbol), units $[M/L^2/T^2]$

Jeremić et al.

Real-ESSI Simulator System

Modeling and Simulation Examples

Conclusion

Real ESSI Components

Real-ESSI Core Functionality

- Introduction to inelastic, nonlinear analysis for practicing engineers
- Use of prescribed, required (low, medium, high) fidelity numerical models to analyze ESSI behavior
- Set of suggested modeling and simulation parameters
- Investigate sensitivity of response to model sophistication
- Investigate sensitivity of response to model parameters

Jeremić et al.

Real-ESSI Simulator System

Modeling and Simulation Examples

Conclusion

Real-ESSI Core Functionality Components

- Structural elements: Truss, Beam, Shell, Super-Element
- Soil, solids: elastic, G/G_{max}
- Contacts/interfaces/joints: Bonded, Frictional (EPP, EPH, EPS), Gap open/close
- Loads: Static, Dynamic (earthquake, 1C or 3×1C), Restart
- Simulation: Explicit no-equilibrium, Implicit equilibrium
- Core Functionality Application programs: APPs

Verification and Validation

Verification and Validation

- Verification: provides evidence that the model is solved correctly. Mathematics issue. Well developed for the Real ESSI Simulator.
- Validation: provides evidence that the correct model is solved. Physics issue. Work in progress, US-DOE project.
- Prediction: use of computational model to foretell the state of a physical system under consideration under conditions for which the computational model has not been validated.

Conclusion

Verification and Validation

V & V Motivation

- How much can (should) we trust model implementations (verification)?
- How much can (should) we trust numerical simulations (validation)?
- How good are our numerical predictions?
- Can simulation tools be used for improving safety and economy?
- V & V procedures are the primary means of assessing accuracy in modeling and computational simulations
- V & V procedures are the tools with which we build confidence and credibility in modeling and computational simulations

Plastic Energy Dissipation

Energy Input and Dissipation

Energy input, dynamic forcing

Energy dissipation outside SSI domain:

SSI system oscillation radiation Reflected wave radiation

Energy dissipation/conversion inside SSI domain:

Inelasticity of soil, contact zone, structure, foundation, dissipators

Viscous coupling with internal/pore fluids, and external fluids

Numerical energy dissipation/production

Jeremić et al.

Plastic Energy Dissipation

Inelastic Modeling of Soil Structure Systems

- Soil, inelastic, elastic-plastic
 Dry, single phase
 Unsaturated, partially saturated
 Fully saturated
- Contact/interface/joint, inelastic, soil/rock foundation
 - Dry, single phase,
 - Normal, hard and soft, gap open/close Friction, nonlinear
 - Fully saturated, suction, excess pressure, buoyant force
- Structure, inelastic, damage, cracks

Nonlinear/inelastic 1D reinforced concrete fiber beam Nonlinear/inelastic 3D reinforced concrete solid element Alcali Silica Reaction concrete modeling

Jeremić et al.

Introduction
000000000

Plastic Energy Dissipation

Inelastic Soil and Inelastic Contact/Interface/Joint

- Shear velocity of soil $V_s = 500 m/s$
- ► Undrained shear strength (Dickenson 1994) V_s[m/s] = 23(S_u[kPa])^{0.475}
- For $V_s = 500 m/s$ Undrained Strength $S_u = 650 kPa$ and Young's Modulus of E = 1.3 GPa
- ► von Mises, Armstrong Frederick kinematic hardening $(S_u = 650 kPa \text{ at } \gamma = 0.01\%; h_a = 30 MPa, c_r = 25)$
- Soft contact (concrete-soil), gaping and nonlinear shear

LICDA

Real-ESSI Simulator System

Real-ESSI Simulator System

The Real-ESSI, Realistic $\underline{\mathbf{M}}$ odeling and $\underline{\mathbf{S}}$ imulation of $\underline{\mathbf{E}}$ arthquakes, $\underline{\mathbf{S}}$ oils, $\underline{\mathbf{S}}$ tructures and their Interaction. Simulator is a software, hardware and documentation system for high fidelity, high performance, time domain, nonlinear/inelastic, deterministic or probabilistic, 3D, finite element modeling and simulation of:

- statics and dynamics of soil,
- statics and dynamics of rock,
- statics and dynamics of structures,
- statics of soil-structure systems, and
- dynamics of earthquake-soil-structure system interaction

Jeremić et al.

LICDA

Real-ESSI Simulator System

Summary

- Numerical modeling to predict and inform, rather than fit
- Sophisticated inelastic/nonlinear modeling and simulations need to be done carefully and in phases
- Education and Training is the key!
- Collaborators: Feng, Yang, Behbehani, Sinha, Wang, Wang, Pisanó, Abell, Tafazzoli, Jie, Preisig, Tasiopoulou, Watanabe, Luo, Cheng, Yang.
- Funding from and collaboration with the ATC/US-FEMA, US-DOE, US-NRC, US-NSF, CNSC-CCSN, UN-IAEA, and Shimizu Corp. is greatly appreciated,
